DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The IDS's, filed 3/23/04, 5/3/05, have been considered in full.

Drawings

3. The drawings, as originally filed, are acceptable as formal.

Claim Rejections - 35 USC § 112

4. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are replete with language which is vague and indefinite. The claims must be reviewed in their entirety. For example:

Claim 1, line 2, "holes" is indefinite since it is not clear how a ball can circulate in a hole.

Claim 1, line 4, "via" renders the claim indefinite since it is not clear how balls circulate via outside a ball nut.

Claim 1, line 4, it is not clear what is "bored".

Claim 1, lines 9-13, this language is indefinite since it is not clear where the step is formed, how it becomes a ball screw track between holes. Also, it is not clear what "both or one portions" are referring to.

Claims 2 and 3 are indefinite in their entirety.

Claim 4 is indefinite similar to claim 1.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-4, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshida et al. (6,454,042).

Yoshida et al shows a power steering device where a screw (21) and nut (22) have balls (23) circulating endlessly in paths, each path is independent of another and the paths each have a recirculating piece (24) which passes the balls back to the beginning of the circuit; the depth of the recirculating piece must be deeper than the groove to allow the balls to pass over the ridge between the grooves.
